Paddlewheel flow sensor

F3.00

The FLS F3.00 paddlewheel flow sensor model is a simple and reliable device designed for use with any type of solid-free liquids. The sensor is capable of measuring flows from 0.15 m/s (0.5 ft/s) producing a highly repeatable output frequency signal. Extremely solid construction and consolidated technology ensure exceptional returns, with zero or very little maintenance. Dedicated electronics with push-pull output are available for safe connection to any type of digital instrument/PLC input. The family of specially designed adapters reduces installation times in pipes of all materials and sizes, from DN15 to DN600 (0.5-24").
