

*MEASURING, CONTROLLING, REGULATING WITH BUILT-IN
INTELLIGENCE: HSW FLOW INSTRUMENTATION*

Products from Henke-Sass, Wolf are manufactured according to the strictest guidelines in accordance with total quality management and DIN EN ISO 9001. Batch traceability up to the initial material, intensive checks that accompany production, extremely modern production lines and highly motivated, superbly trained employees guarantee the typical HSW quality for trouble-free function over the entire product cycle.

RELIABILITY IS SO BENEFICIAL

Excellent quality and maximum flexibility characterize the solutions from Henke-Sass, Wolf in the area of flow instrumentation. Optimal flow reliability is achieved with the modern instruments from Henke-Sass, Wolf for monitoring, measuring, checking and control.

The flowswitches and flowmeters from Henke-Sass, Wolf are high-quality, reliable instruments for measuring, monitoring and controlling flows. They have proven themselves in many industrial sectors, such as in smelting, vacuum, sealing and sinter furnaces. They are used in induction, welding, desalini-sation and rectifier facilities. Henke-Sass-Wolf offers intelligent and effective solutions for water treatment, heat exchangers, compressors, turbines, laser devices, x-ray equipment, etc. Some of our solutions are also available in ATEX versions.

Also for our industrial products, we have a high degree of technological know-how, typical of Henke-Sass, Wolf, which we also consistently implement in production. And based on our strong international orientation, we are able to deliver top quality at competitive prices.

Henke-Sass, Wolf achieves reliability with modern instruments and methods for monitoring, measuring, checking and control.

HSW flow instrumentation combines intelligence with efficiency.

High degree of technical know-how combined with top quality.

Reliability combined with flexibility.

THE RIGHT TECHNOLOGY FOR RELIABLE RESULTS

Our flow instrumentation uses various methods to get reliable results under all circumstances:

Mechanical pendulum principle

Henke-Sass, Wolf traditionally uses the pendulum measuring principle. Here, a measuring plate fastened to a lever projects into the flowing medium. Depending on the flow velocity, the plate will change its position. The change in position is transferred to the respective evaluation device via the lever. This is the basic principle which is identical for all HSW pendulum devices.

Using the the mechanical principle, the pendulum system is deflected against the force of an external spring. The seal is realized by bellows made of stainless steel. The deflection is detected by a mechanical system. The output is given via a scale with pointer or via a microswitch.

Contactless pendulum system

For this pendulum system, the signal is transmitted without contact by a permanent magnet, arranged on the pendulum, to a reed switch located outside of the medium (protective gas contact).

The resetting force is generated by a leaf spring, which simultaneously serves as a bearing for the lever.

HSW methods ensure high precision and excellent measuring dynamics.

Pendulum system with magnetic resetting

Signals are transmitted the same way as on the pendulum system, without contact. However, resetting does not occur by means of a spring, but by the force of two repelling magnets.

Pendulum system with progressive resetting force

The patented pendulum system works with a progressive spring system, which allows, for this measuring principle, outstanding measuring dynamics within a minimum amount of space. Here, too, signals are transmitted without contact.

Paddle wheel principle

A paddle wheel submerged in the flowing medium rotates as a result of the flow. There are permanent magnets in 2 paddle wheels. A sensor located in the mount detects a signal every time the magnet moves past. Thus, a digital, flow-dependent signal is produced.

Piston measurement principle

The principle: A special piston equipped with a permanent magnet is held in a defined position by a spring. The medium displaces the piston against the force of the spring according to the flow. If the switching point is fallen short of or exceeded, the reed switch outside of the medium is switched without contact by the permanent magnets. The construction is absolutely leak-tight, and can be easily dismantled for any cleaning work. The special piston, divided into a measuring and a guiding section, combines precise switching with high reliability.

HSW flow technology relies on high-precision electronics.

Ultrasonic method

These flowtransmitters work with two ultrasonic sensors which are arranged opposite one another. The delay time of the sound depends on the flow velocity. Both sensors work alternately as transmitter and receiver. The difference in the delay time is proportional to the flow velocity. Unlike other ultrasonic measuring systems, the HSW method works in parallel with the direction of flow. This method offers an extremely compact design, high precision, excellent measuring dynamics and the option of measuring very high flow velocities without having to reduce the cross section.

Calorimetric principle

A highly precise and very fast temperature sensor in the sensor of the measuring device monitors the medium temperature. Using a micro-heater, the sensor is held at a defined temperature level, which is above the temperature of the medium. The temperature at the sensor changes depending on the flow velocity. This tendentially changes the temperature difference between the sensor and medium. High-precision electronics prevent the change in temperature difference by adapting the heat output. The heat output is then proportional to the flow velocity and is used to generate the output signal. Temperature changes in the medium are recorded separately and subtracted accordingly.

FLOWSWITCH DW-K VERSATILE, RELIABLE, INEXPENSIVE!

The DW-K was developed for applications such as monitoring coolant circulation systems with low flow rates. It is compact and ideal for switching points between 0.1 and 2.5 l/min, which meets the desires and demands of our customers. It works reliably according to the piston measuring principle and is resistant to dirt and calcification.

- For monitoring lubricant, coolant and water circulation systems (gases on request)
- Individual connection solutions, material designs and switching ranges can also be supplied in small quantities
- Low switching points possible, large switching range
- Requires little space, can easily be disassembled
- Robust design, very reliable with a long service life, inexpensive
- Position-independent
- Ideal for low switching points (between 0.1 and 2.5 l/min)

Technical data

Switch range:	0.1 – 2.5 l/min.
Connection:	Nipples for 8 mm flexible tube or 1/4" internal thread (other versions available on request)
Reed switch:	200 V, 15 W, 1 A max. (others on request)
Piston:	POM
Spring:	Stainless steel
Housing:	Brass, stainless steel (others on request)
Flow direction:	Optional
Hysteresis:	Approx. 0.1 l/min.
Pressure max.	max. 25 bar (others on request)
Temperature max.	100 °C

Technical drawings /Example

A multitude of special designs are available on request with regard to materials, switching points, connection variants, etc.

FLOWSWITCH DW-L
INEXPENSIVE AND FLEXIBLE!

The DW-L offers a very inexpensive and yet flexible option for monitoring flow rates. It works according to the peristaltic principle with magnetic resetting and its standard version is made completely of plastic. Special variants allow the combination with metal materials, thereby expanding its range of applications.

DW-LP

DW-LE

- Plastic version – no corrosion
- Easy adjustment of the switching point by means of set screw
- No spring – always the same resetting force
- Low pressure loss
- Different versions, easy adaptation to different requirements
- Very inexpensive

FLOWSWITCH DW-R
VERSATILE AND EXTREMELY RELIABLE!

The DW-R, which works according to the contactless pendulum principle, has proven itself to be a simple, reliable and inexpensive solution for monitoring flows in pipelines. Special versions are available on request with regard to materials, switching behaviour/switching points, connection variants, etc.

- Divided structure, top section and pendulum system fixed to pipe section, ensuring that cleaning can be done easily and quickly – without adjustment
- Entire pendulum system is easily exchangeable
- Pendulum system made completely of stainless steel as standard
- Pressure-independent function
- Low pressure loss
- Simple, reliable and inexpensive flowswitch
- Resistant to contaminated media and calcification (with the

exception of magnetic particles)

FLOWSWITCH DW-R

Technical data

Power supply:	230 V; 1.5 A; 80 W; 90 VA max.
Protection type:	IP 65 (others on request)
Temperature of medium:	100 °C max. (others on request)
Ambient temperature:	70 °C max.
Switch:	Can be used normally closed or normally open contact, SPDT switch is available on request
Switch hysteresis:	Approx. 5 %

FLWSWITCH DW-N

RELIABLE MONITORING, EASY OPERATION!

Flowswitch with adjustable switching point and optical switch-ing display using a glow lamp. The DW-N is based on the extremely reliable mechanical pendulum principle. The devices are very robust and operationally reliable. Both contaminated media and magnetic fields are no problem. Since no magnets are used, even ferrous media have no adverse effects.

- Simple switching point adjustment in accordance with small scale
- Compulsory movement transmission to the micro-switch ■ Hermetic separation of the medium from the micro-switch by means of bellows
- Resistant to contamination and magnetic fields
- High electrical load capacity
- Maximum operational reliability and serviceability ■ Available for all flow directions and installation positions ■ Ex version also available
- Version with two switches is available

FLOWMETER DW-U

RELIABLE MONITORING AND MEASURING!

Simple, very reliable flow meter with analogue display of the current flow, adjustable switching point, optical switching display via a glow lamp. The DW-U offers all advantages of the DW-N device, but also displays the current flow rate.

- Display of current flow rate
- Simple switching point adjustment in accordance with small scale
- Hermetic separation of the medium from the micro-switch by means of bellows
- Resistant to contamination and magnetic fields
- High electrical load capacity
- Maximum operational reliability and serviceability ■ Available for all flow directions and installation positions ■ Ex version also available
- Version with two switches is available

FLOWTRANSMITTER DW-D

RELIABLE MONITORING, EXACT CONTROL!

The DW-D is a flowtransmitter with a digital display of the current flow rate, analogue output, totalisator, voltage output, two adjustable switching relays and a display of the switching point for monitoring limit values. It works according to the patented HSW pendulum principle with progressive resetting force.

- Extremely reliable way deflection measuring method ■ For liquids and gases
- Resistant to contamination (with the exception of magnetic particles)
- No bearings, no friction
- Very wide measuring range
- Linear output signal
- High precision in a wide temperature range
- Very good price/performance ratio
- Optional: RS232C interface
- Totalisator

Technical data

Power consumption:	200 mA max.
Power supply:	24 V DC ± 10 %
Analogue output:	4 – 20 mA
Voltage output:	0 – 10 V
Totalisator:	With EEPROM memory
Display:	LCD dot matrix module, 2 x 8 positions, illuminated
Medium temperature:	-20 – 100 °C (other ranges on request)
Accuracy:	±2 % of final value
Protection type:	IP 65
Measuring range:	Flow ratio 1:10 standard (e.g. 10 – 100 l/min.)
Max. pressure:	25 bar (higher values on request)
Flow direction:	any
Make and break contacts:	2 x 230 V 1 A max., adjustable

PADDLE WHEEL FLOWTRANSMITTER DW-F FOR WIDER MEASURING RANGES!

The DW-F flowtransmitter is an extension for the DW-D deflec-tor plate flowtransmitter and is equipped with a paddle wheel sensor. The DW-F device type corresponds exactly to the struc-ture of the DW-D device type with the exception of the sensor system. The DW-F works with a paddle wheel rather than with a pendulum system. This opens up additional possibilities of ideally adapting the HSW DW-F flowtransmitter to the corre-sponding application areas.

- Paddle wheel principle
- For liquids
- High measuring sensitivity and very wide measuring range
- High-quality bearings
- Linear output signal
- High precision in a wide temperature range
- Very good price/performance ratio
- Optional: RS232C interface
- Totalisator

PADDLE WHEEL FLOWTRANSMITTER DW-F

Technical data

Power consumption:	200 mA max.
Power supply:	24 V DC ± 10 %
Totalisator:	With EEPROM memory
Medium temperature:	-20~80 °C
Accuracy:	±2 % of final value
Signal transmission system:	Magnet/hall sensor
Protection type:	IP 65
Measuring range:	Flow ratio 1:20 (e.g. 5~100 l/min.)
Max. pressure:	25 bar (higher values on request)
Make and break contacts:	2 x 230 V 1 A max., adjustable
Axis:	Carbide
Bearing:	Sapphire
Paddle wheel:	POM
Body:	Brass or stainless steel
Housing:	Polycarbonate

Flow rate for water 20 °C

FLOWTRANSMITTER DW-FS

FLOW MONITORING IN COMPACT DESIGN

By restricting it to the main function (analogue flow output signal), a very compact design has been realized at an extremely reasonable price. There are two product series of the DW-FS: the DW-FS and the DW-FS-AV. Both work according to the paddle wheel principle. The signal is transmitted using a Hall sensor and magnet. A 4–20 mA or frequency output signal is provided, which is programmed customer-specifically. This makes it possible to adapt the system individually to the respective application.

DW-FS

- DW-FS is the inline variant with T-piece.
- The DW-FS-AV is welded onto larger pipelines

Paddle wheel

Technical data

DW-FS, DW-FS-AV

Measuring principle:	Paddle wheel
Housing:	Stainless steel (1.4571)
Paddle wheel:	POM
Bearing:	Ruby/sapphire
Axis:	Hard metal
Accuracy:	±2 % of final value
Power supply:	12–24 V DC
Signalausgänge:	4–20 mA, Frequenz (parametrierbar max. 32 kHz)
Signalausgänge:	
Ambient temperature:	-40–80 °C
Medium temperature:	-40–100 °C
Electrical connection:	3 m cable

Measuring range:

Typ Type	DN	Rp	Range min. l/min	Range max. l/min
DW-FS-15	15	1/2"	2.5	50
DW-FS-20	20	3/4"	5.5	92
DW-FS-25	25	1"	8	145
DW-FS-32	32	1 1/4"	14	240
DW-FS-40	40	1 1/2"	22	375
DW-FS-50	50	2"	35	580
DW-FS-AV	Bereich/Range 0.3–5 m/s			

Technical drawings

Typ Type	Dim. A	Dim. B
DW-FS-15	80	43
DW-FS-20	55	43
DW-FS-25	58	51
DW-FS-32	65	62
DW-FS-40	67	68
DW-FS-50	78	81

ULTRASONIC FLOWTRANSMITTER DW-S
MONITORING WITH ULTRASONIC SENSOR SYSTEM

The flowtransmitter of type DW-S works with two ultrasonic sensors which are arranged opposite one another. With an extremely compact design, it offers high precision, excellent measuring dynamics and the option of measuring high flow velocities without reducing the cross section.

Configuration software (optional)

- No moving parts
- No cross section reduction – no pressure loss
- Very high measuring dynamics
- Even high flow velocities can be measured with no problem
- Compact design
- Very good long-term stability
- Excellent price-to-performance ratio
- Totalisator included

Typ/Type	DW-S-15-A	DW-S-15-B	DW-S-25-B	DW-S-FL-25-B	DW-S-50-B	DW-S-FL-50-B
Measuring range	0.5–80 l/min.	0.5–80 l/min.	1–180 l/min.	1–180 l/min.	8–1,000 l/min.	8–1,000 l/min.
Connection	1/2" external thread	1/2" external thread	1" external thread	Flange DN25 PN 16	2" external thread	Flange DN50 PN 16
Material	Brass 2.0401	Stainless steel 1.4571	Stainless steel 1.4571	Edelstahl 1.4571 Stainless steel 1.4571	Edelstahl 1.4571 Stainless steel 1.4571	Edelstahl 1.4571 Stainless steel 1.4571

Technical data

Sensors:	Stainless steel 1.4571
Housing:	Aluminium, die cast
Measurement functions:	Flow speed, flow quantity and totaliser
Display:	2 x 16 digits illuminated
Power supply:	24 V DC $\pm$ 15 %
Power consumption:	200 mA max.
Relays:	30 V DC/1 A (2x) SPDT
Signal output:	4–20 mA, 0–210 V, frequency (adjustable max. 32 kHz)
Interface:	RS232, RS-485 (with optional interface cable only)
Measuring principle:	Ultrasonic transit-time difference method
Medium:	Acoustical conductive fluids, gas solids contents $\leq$ 10 volume %
Operation:	3 buttons at the front side
Flow direction:	Optional (housing is rotatable)
Accuracy:	$\pm$ 2 % v. M.E. at norm conditions
Operation temperature:	-10–60 °C
Operation temperature (medium):	-20–100 ° (higher on request)
Pressure loss:	No cross-section reduction
Max. pressure:	25 bar
Protection class:	IP 67
Unities:	Selectable

Technical data with dimensions

ULTRASONIC FLOWTRANSMITTER DW-SM

VERSATILE

The flowtransmitter type DW-SM works according to the same principle as the DW-S, but does without the display. Thanks to the integrated USB interface, the DW-SM is very easy to program for many applications.

- No moving parts
- No cross section reduction – no pressure loss
- Very high measuring dynamics
- Even high flow velocities can be measured with no problem
- Compact design
- Very good long-term stability
- Excellent price-to-performance ratio
- Easy programming thanks to the USB interface

Typ/Type	DW-SM-15-A	DW-SM-15-B	DW-SM-25-B	DW-SM-FL-25-B	DW-SM-50-B	DW-SM-FL-50-B
Measuring range	0.5–80 l/min.	0.5–80 l/min.	1–180 l/min.	1–180 l/min.	8–1,000 l/min.	8–1,000 l/min.
Connection	2" external thread	1/2" external thread	1" external thread	Flange DN25 PN 16	2" external thread	Flange DN50 PN 16
Material	Brass 2.0401	Stainless steel 1.4571	Stainless steel 1.4571	Stainless steel 1.4571	Stainless steel 1.4571	Stainless steel 1.4571

Technical data

Sensors:	Stainless steel 1.4571
Housing:	Aluminium
Power supply:	24 V DC ± 15 %
Power consumption:	200 mA max.
Relays:	30 V DC/ 1 A (2x) SPDT
Signal output:	4–20 mA, 0–10 V, frequency (adjustable max. 32 kHz)
Interface:	RS232, RS-485 (with optional interface cable only)
Measuring principle:	Ultrasonic transit-time difference method
Medium:	Acoustical conductive fluids, gas solids contents ≤ 10 volume %
Operation:	By USB interface
Flow direction:	Optional
Accuracy:	±2 % v. M.E. at norm conditions
Operation temperature:	-10–60 °C
Operation temperature (medium):	-20–100 ° (higher on request)
Pressure loss:	No cross-section reduction
Max. pressure:	25 bar
Protection class:	IP 67

Technical drawings

FLOWSENSOR DW-T
 ELECTRONIC FLOW MONITORING

The DW-T works without moving parts and is ideal for monitor-ing flows with a minimum amount of pressure loss. The DW-T works according to the familiar calorimetric principle and has been ideally adapted to the requirements of modern process monitoring through the implementation of the newest compo-nents as well as a special measuring routine.

- Integrated USB interface for easy configuration to individual wishes
- Welded-on version for easy adaptation to a wide range of line sizes (DW-T AV)
- Inline version (DW-T) with T-piece

Technical data

Measuring principle:	Calorimetric
Housing (wetted parts):	Stainless steel (1.4571)
Power supply:	24 V DC ± 10 %
Analogue output:	4–20 mA, can be calibrated
Switches:	2 x Transistor open collector 100 mA max.
Ambient temperature:	–25–60 °C
Medium temperature:	–25–80 °C
Electrical connection:	3 m cable
Protection class:	IP 67
Max. pressure:	50 bar
Adjustment range:	0.1–1.5 m/s
Connection:	Welding socket or T-section (1/2"–2" Thread)

Technical drawings

Special requirements – special solutions

Henke-Sass, Wolf develops special solutions for special conditions or special requirements. Our own development platform allows us to quickly, flexibly and reliably meet new technical challenges. Thanks to our strong product portfolio and our high degree of production expertise, we can produce special versions of the existing flowswitches within a short time. We will be glad to accommodate special customer wishes – If you are looking for a special solution or have special wishes, just contact us.
